SOP MODULE 1 | ACCOUNT MANAGER

Standard Operating Procedure Manual

Complete End-to-End Guide for Account Managers (Query Senders & Resolution Verifiers)

System: WMD Query & SLA Management Portal | SLA Target: 48 Hours (Extendable) | Version: 2.0

1. ROLE OVERVIEW & AUTHORIZED ACCOUNT MANAGER ACCOUNTS

As an Account Manager (AM) in the WMD Query Portal, you are the primary Query Sender and Final Verifier. You submit operational or client queries to Managers, monitor their progress against the 48-hour SLA, communicate via Sender Remarks, review Completion Date Extension requests from Managers, verify completed solutions, and provide mandatory anonymous 1-5 Star Ratings.

Key Operational Responsibilities:

- Submit clear, well-documented queries (Title + Detailed Description) assigned to the appropriate Manager.
- Monitor all queries you created via the Home Dashboard and Queries Table.
- Add or edit Sender Remarks to provide additional context, follow-ups, or feedback to the assigned Manager.
- Review and Approve or Decline "Completion Date Extension" requests submitted by Managers when external bottlenecks arise.
- Verify queries marked "Mgr Done" by checking the "Sender Done" box (or keeping it unchecked if further work is required).
- Provide a mandatory, honest 1 to 5 Star Rating on the Manager's resolution (strictly anonymous to the Manager).

User ID	Name	Login Email	Role Tab on Login	System Access Scope
am-1	Shakti	wmdklshakti@gmail.com	Account Manager	Queries created by Shakti + Manager KPI Leaderboard
am-2	Kavita	wmdklkavita@gmail.com	Account Manager	Queries created by Kavita + Manager KPI Leaderboard
am-3	Linda	wmdkllinda@gmail.com	Account Manager	Queries created by Linda + Manager KPI Leaderboard

2. GETTING STARTED: LOGGING IN & ENABLING REAL-TIME ALERTS

- Step 1 - Open Portal & Select Role Tab: Open the WMD Query Portal in your browser. On the Sign In card, click the "Account Manager" tab at the top left. (Note: If you accidentally leave "Manager" or "Admin" selected, the system will prompt: "Please select the Account Manager tab to sign in with this account.")
- Step 2 - Enter Credentials & Sign In: Enter your registered email address and 6-digit password. Click "Show" if you wish to verify your password, then click "Login". Your session is saved automatically in your current browser tab.
- Step 3 - Enable Browser & Background Notifications: Upon logging in, look for the top Notification Banner ("Enable Notifications Alerts") or click "Notifications" (bell icon) in the left sidebar. Click "Enable Alerts" / "Enable Notifications" and click "Allow" on your browser prompt. Note: You must access the portal via HTTPS (or localhost) for Web Push to work.
- Step 4 - Understand Tab Dot & Chime Alerts: Whenever a Manager adds a remark, marks a query Done, requests an extension, or a query becomes Delayed, your browser plays a two-tone audio chime and displays a red unread counter dot on the browser tab icon.

3. PORTAL NAVIGATION & SCREEN-BY-SCREEN GUIDE

Screen / Control	What You See	How Account Managers Use It
Sidebar Navigation	Home, Queries (with live open badge count), KPI, Notifications, Refresh, Collapse toggle, User Profile & Logout.	Use the badge counter on "Queries" to see how many of your submitted queries are still open. Click "Refresh" anytime to force a live database sync.
Home Dashboard	4 Top KPI Cards (Created, Completed, Pending <48h, Overdue >48h), Manager Filter dropdown, and 4 Analytics Panels.	Filter your dashboard by a specific Manager using the top "Manager" dropdown. Check "AM Queue" in Completion Rate to see how many queries are waiting on YOUR verification!

Screen / Control	What You See	How Account Managers Use It
Queries Page	Full interactive table of your queries, Filter bar (Manager, Status, Reset), "+ Add Query" button, and Date sort toggle.	Click "+ Add Query" to submit new issues. Filter by "Manager Checked" to find queries waiting for your verification, or "Extension Requested" to review deadline extensions.
KPI Page	Manager KPI Leaderboard with Time Window pills (7 Days, 14 Days, 30 Days, All Time) and Team Performance breakdown.	View how Managers are performing across 7d/14d/30d windows. Click any Manager card to highlight their stats.

4. STANDARD OPERATING PROCEDURES FOR EVERY SITUATION (12 CORE SCENARIOS)

Below are the 12 standardized operational situations encountered in the WMD Query Portal. Every module covers these exact same 12 situations so Account Managers, Managers, and Admins remain 100% aligned on who does what at every stage.

Situation 1: Logging In & Setting Up Your Workspace [Account Manager Role]

Scenario: You are starting your shift and need to access your Account Manager portal and ensure alerts are active.

1. Select the "Account Manager" tab on the Login screen, enter your email and password, and click "Login".
2. If the yellow/orange Notification Banner appears at the top, click "Enable Alerts" so you receive desktop/mobile push notifications even when your tab is minimized.
3. Review your Home Dashboard: check the "Created" count, "Overdue" count, and look at the "AM Queue" tile (which shows queries where the Manager has marked Done and is waiting for your confirmation).

System Logic & Policy: Account Managers only see queries where they are the Sender (account_manager_id = your ID). You cannot see other Account Managers' private queries.

Situation 2: Submitting a New Query [AM as Query Sender]

Scenario: A client issue, invoice discrepancy, stock request, or operational task needs to be resolved by a specific Manager.

1. Navigate to the "Queries" page from the left sidebar and click the "+ Add Query" button at the top right.
2. In the "New Query" modal, select the target Manager from the "Send Query To (Manager)" dropdown (Muugaa, Awi, Jay, Tamil, Aizam, or Usha).
3. Enter a concise "Query Title" (e.g., "Missing Batch Expiry on Invoice #8841") and a thorough "Query Description" with all relevant details.
4. Click "Submit Query". The system automatically generates the next sequential ID (e.g., QRY-025), timestamps creation, and sets the default 48-hour SLA deadline.

System Logic & Policy: All queries can ONLY be addressed to Managers. Upon submission, the assigned Manager and Admin immediately receive a "New Query" push notification.

Situation 3: Editing or Updating Your Query Details After Submission [AM as Query Sender]

Scenario: You made a typo in the query title/description or need to add an invoice number to the original query text.

1. Locate the query row in the "Queries" table.
2. In the "Query" column, click the inline "Edit" button next to your query text.
3. Update the Query Title input and/or Query Description textarea.
4. Click "Save" (or "Cancel" to discard changes). The updated text syncs immediately in real time.

System Logic & Policy: Only the original Sender of a query can edit the Query Title and Description. The creation timestamp (createdAt) is strictly immutable and never resets when edited.

Situation 4: Adding or Updating Follow-Up Remarks (Sender vs. Manager Remarks) [AM Adding Sender Remark]

Scenario: You want to send an update, answer a Manager's question, or ask for a status check on an open query.

1. In the "Queries" table, find the "Sender Remark" column for your query and click "Edit".
2. Enter a short "Remark title..." and detailed "Remark description...", then click "Save".
3. To read the full text of either the Manager Remark or Sender Remark without truncation, click anywhere on the query row (or click the Query ID badge) to open the "View Query Details" pop-up modal.

System Logic & Policy: You can edit the "Sender Remark" column at any time. Saving a new or modified Sender Remark dispatches a real-time push notification to the assigned Manager and Admin.

Situation 5: Resolving a Query & Marking "Manager Done" [AM Waiting on Manager]

Scenario: The assigned Manager is working on your query and finishes their resolution.

1. While the Manager is working, the "Mgr Done" checkbox is read-only for you, and your "Sender Done" checkbox is locked/disabled.
2. Once the Manager resolves the issue, they are required by Director Policy to enter a Solution Remark (Title + Description) and check "Mgr Done".
3. You will receive an instant notification ("Manager Checked Done"). The row status changes to "Mgr Checked" (middle priority in table sorting), and your "Sender Done" checkbox becomes unlocked!

System Logic & Policy: Account Managers cannot check "Mgr Done", and cannot check "Sender Done" until "Mgr Done" is checked first. The exact moment the Manager checks "Mgr Done" is recorded in manager_done_at_ms for KPI turnaround calculation.

Situation 6: Handling a Query Approaching or Exceeding the 48-Hour Deadline (Need Extra Time) [AM Monitoring SLA & Extensions]

Scenario: A query is taking longer than expected due to third-party delays (e.g., waiting on bank clearance or supplier confirmation), or has crossed the 48-hour threshold.

1. If 48 hours pass from creation (or past an approved target date) without completion, the query automatically flags as "Delayed" (red pill), and the background SLA monitor sends a "Query Delayed" alert to you, the Manager, and Admin.
2. If the Manager needs legitimate extra time before completing the query, advise them to click "+ Extend" on the query row to submit a formal Completion Date Extension request to you.
3. Use the Status filter dropdown ("Delayed (Overdue)" or "Extension Requested") on the Queries page to track these items closely.

System Logic & Policy: Default SLA is exactly 48 hours from creation. However, if the Manager requests an extension and you approve it, the new proposed date becomes the official target deadline and clears the Delayed status!

Situation 7: Reviewing & Approving or Declining a Completion Date Extension Request [AM as Extension Approver]

Scenario: A Manager has requested extra time on your query, displaying an orange "[Ext] Ext Req" pill and a "Review Ext [Ext]" action button.

1. Click the "Review Ext [Ext]" button in the Status column (or open the Query Details modal by clicking the row).
2. In the "Review Extension Request" modal, inspect the Manager's "Proposed New Deadline" and read the "Manager's Reason".
3. To APPROVE: Click "[OK] Approve Extension". The query's Target Completion deadline updates to the proposed date, the status pill shows "Extended", and any Delayed flag is cleared so the Manager's KPI stays on-time.
4. To DECLINE: Enter an optional feedback note in "Note / Feedback" (e.g., "Client needs this by 5 PM today, cannot extend") and click "[X] Decline Request". The original 48-hour deadline remains enforced.

System Logic & Policy: Peer Accountability Rule: Only the Query Sender (or Admin) can approve or decline an extension request. The Manager receives an instant push notification of your decision.

Situation 8: Verifying Resolution & Mandatory 1-5 Star Rating ("Sender Done") [AM Verifying & Completing Query]

Scenario: The Manager has marked "Mgr Done" and provided their solution remark. You have verified that the issue is genuinely resolved.

1. Read the Manager's solution in the "Manager Remark" column (or click the row to view the full description).
2. Click the "Done" checkbox in the "Sender Done" column.
3. If you have not rated the Manager on this query yet, the "Rate Manager" modal pops up automatically.
4. Select 1 to 5 stars based on the quality and speed of the Manager's resolution, then click "Submit Rating & Complete".
5. Both "Mgr Done" and "Sender Done" are now checked! The query status turns green ("Completed"), moves to the bottom of the queue, and records the final completion timestamp.

System Logic & Policy: A query is ONLY "Completed" when BOTH Manager Done and Sender Done are checked. A 1-5 Star Rating is mandatory before Sender Done can be completed.

Situation 9: What If the Manager's Resolution Is Incomplete or Unsatisfactory? [AM Rejecting Incomplete Resolution]

Scenario: The Manager checked "Mgr Done", but when you checked the invoice/stock, part of the problem is still unresolved.

1. Do NOT check the "Sender Done" box! (If you already checked "Sender Done" by mistake, click "Sender Done" again to uncheck it - this immediately reverts the query status from "Completed" back to "Mgr Checked" / Pending).
2. Click "Edit" in the "Sender Remark" column and write a clear explanation of what is still missing or incorrect.
3. Click "Save". The Manager receives a notification with your remark and sees that the query is still open.
4. If the Manager unchecks their own "Mgr Done" box to rework the issue, the system automatically unchecks "Sender Done" as well.

System Logic & Policy: Dual-Check Safeguard: Managers cannot close queries unilaterally. As long as "Sender Done" remains unchecked, the query stays open in the active queue.

Situation 10: Updating or Changing a Manager Rating Anytime (Strict Anonymity Rules) [AM Managing Ratings]

Scenario: You want to rate a Manager before completion, or you want to change a 1-5 star rating you previously submitted.

1. In the "Rating" column of the Queries table, you will see either a "* Rate" button (if unrated) or your current gold star badge (e.g., "**** 4/5").
2. Click the "* Rate" button or click your existing star badge anytime (even after the query is Completed).
3. Select your new star rating (1 to 5 stars) in the modal and click "Save Rating" / "Update Rating".

System Logic & Policy: Strict Anonymity Guarantee: The receiving Manager NEVER sees individual query ratings (they only see " - " in the Rating column). Only you (the Sender) and the Admin can see individual query ratings. Managers only see their aggregated average rating on the KPI page.

Situation 11: Filtering, Sorting & Inspecting Queries in the Portal [AM Queue Management]

Scenario: You have dozens of queries and need to quickly find specific items (e.g., overdue items for Manager Jay, or items awaiting your verification).

1. On the "Queries" page, use the "Manager" dropdown to filter by a specific assigned Manager.
2. Use the "Status" dropdown to filter by: "Pending (On Track)", "Extension Requested [Ext]", "Unchecked", "Manager Checked" (your action queue!), "Delayed (Overdue)", or "Completed".
3. Click the "Date v/^" column header to toggle between newest-first and oldest-first sorting within each priority stage.
4. Click "Reset" whenever filters are active to return to the default view.

System Logic & Policy: Automatic 3-Tier Priority Sorting: The table always groups (1) Unchecked queries at the very top, (2) Manager Checked queries in the middle, and (3) Completed queries at the bottom.

Situation 12: Monitoring KPIs, Refreshing Live Data & Logging Out [AM Analytics & Shift End]

Scenario: You want to check how responsive each Manager is over the past week, sync data, or wrap up your work session.

1. Click "KPI" in the left sidebar to view the Manager KPI Leaderboard. Toggle between "7 Days", "14 Days", "30 Days", and "All Time" at the top right.
2. Review each Manager's Overall KPI %, Completion Rate, Average Rating, and Avg Response hours.
3. If your network connection was briefly interrupted, click the "Refresh" button in the sidebar to force a fresh sync from Supabase.
4. When finished with your shift, click the "Logout" button at the bottom of the left sidebar to clear your active session.

System Logic & Policy: Your honest ratings and timely verifications directly feed the Manager KPI Leaderboard and help track Sender Verification latency.

5. SLA DEADLINES, EXTENSION RULES & KPI SCORING FORMULAS

- Default 48-Hour SLA Deadline: Every query starts with a 48-hour target deadline from its creation timestamp (createdAt + 48 hours).
- Approved Extension Override: When you approve a Manager's extension request, targetDueAtMs updates to the approved date/time, and all on-time/delay evaluations use that new deadline.
- How Your Ratings Impact Manager KPI: A Manager's "Overall KPI %" is the 50/50 average of their Turnaround KPI % and their Average Star Rating Percentage ((Avg Rating / 5.0) x 100). For example, 90% Turnaround + 4.5 Stars (90%) = 90% Overall KPI.
- Turnaround Point System (Evaluated when Manager marks Done): Completed On-Time (<= deadline) = +1.0 pt | Completed Late (> deadline) = +0.5 pt | Open & Overdue (> deadline) = 0.0 pt | Open & In-Progress (<= deadline) = Excluded until deadline passes or Manager finishes.

6. NOTIFICATION MATRIX, TROUBLESHOOTING & END-OF-SHIFT CHECKLIST

Portal Event	Trigger Action	Who Gets Notified	Your Expected Action
Manager Remark Added	Assigned Manager saves a new/updated remark	You (Sender AM) + Admin	Read the Manager's remark and reply via Sender Remark if needed.
Manager Checked Done	Assigned Manager checks "Mgr Done"	You (Sender AM) + Admin	Verify the solution, check "Sender Done", and submit 1-5 Star Rating.
Extension Requested	Assigned Manager requests new target date	You (Sender AM) + Admin	Click "Review Ext [Ext]" to Approve or Decline the proposed date.
Query Delayed (>48h)	Query passes deadline without Manager Done	You (Sender AM) + Manager + Admin	Follow up with the Manager or review any pending extension request.

Daily Closing & Logout Procedure (Till the Very End):

- Before logging out, filter the Queries page by Status = "Manager Checked" and verify + rate all resolved queries so Managers receive credit and queries close cleanly.
- Filter by Status = "Extension Requested [Ext]" to ensure no Manager is left waiting on a deadline extension decision.
- Always provide constructive details in "Sender Remark" if you decide to leave "Sender Done" unchecked after a Manager marks "Mgr Done".
- Click "Logout" in the bottom-left sidebar when leaving your workstation.
