WMD QUERY PORTAL | COMPLETE SOP HANDBOOK

Standard Operating Procedure Manual

Complete 3-Module Operational Guide (Account Manager, Manager & Admin)

Covers Login to Logout | 12 Standardized Scenarios Across All Roles | Dual-Role Manager Rules | SLA & KPI

Handbook Structure (3 Role-Specific Modules):

Module	Target User Role	Role Scope in Portal	Core Focus
Module 1	**Account Manager (AM)**	Query Sender & Final Verifier	Submitting queries to Managers, adding Sender Remarks, approving/declining extensions, verifying "Sender Done", and mandatory anonymous 1-5 Star Rating.
Module 2	**Manager (Dual Role)**	BOTH Query Receiver AND Query Sender	Resolving assigned queries within 48h SLA ("Mgr Done" + mandatory Solution Remark), requesting extensions, AND sending inter-manager queries to peer Managers.
Module 3	**Admin (Director)**	Global Oversight & System Governance	Full visibility of all queries & individual ratings, overriding/approving extensions, auditing 7d/14d/30d/All-Time KPIs, and generating the 1-Page Weekly PDF Report.

Cross-Role Comparison of the 12 Standardized Situations:

#	Situation	Module 1: Account Manager	Module 2: Manager (Receiver / Sender)	Module 3: Admin
1	**Login & Setup**	Login on AM tab; enable alerts; check AM Queue.	Login on Manager tab; enable alerts; check 7d KPI & Dual Queue.	Login on Admin tab; global alerts; check Team Avg KPI.
2	**New Query**	Submit query to any Manager.	As Sender: submit query to any peer Manager.	Submit executive query to any Manager.
3	**Edit Query Text**	Inline edit Title & Description of your query.	Sender: inline edit. Receiver: read-only.	Audit full details; edit queries created by Admin.
4	**Remarks**	Add/edit Sender Remark.	Receiver: edit Manager Remark. Sender: edit Sender Remark.	Audit both remarks; receive alerts on all updates.
5	**Manager Done**	Wait for Mgr Done; unlocks Sender Done.	Receiver: enter mandatory Solution Remark & check Mgr Done.	Enforce policy; audit anti-cheat manager_done_at timestamp.
6	**48h SLA & Extra Time**	Monitor Delayed status; advise Manager to request extension.	Receiver: click "+ Extend" before/at 48h with proposed date & reason.	Monitor Delayed watchlist; can initiate "+ Extend" on any query.
7	**Review Extension**	Click "Review Ext" to Approve or Decline.	Sender: Approve/Decline peer Manager extension. Receiver: await review.	Global authority to Approve or Decline ANY extension request.
8	**Verify & Rate (1-5*)**	Check Sender Done + mandatory 1-5 Star Rating.	Sender: check Sender Done + rate peer Mgr. Receiver: await closure.	Audit completion latency & verify closure.
9	**Incomplete / Rework**	Keep Sender Done unchecked; add Sender Remark.	Receiver: uncheck Mgr Done if reworking; update remark. Sender: add remark.	Mediate disputes; review both remarks.
10	**Rating Anonymity**	Can view & update your own 1-5* rating anytime.	Receiver: rating hidden ("-"). Sender: can view & update rating.	Exclusive visibility: sees ALL individual 1-5* ratings & who rated.

#	Situation	Module 1: Account Manager	Module 2: Manager (Receiver / Sender)	Module 3: Admin
11	**Filtering & Sorting**	Filter by Manager & Status; 3-stage priority sort.	Use "View" filter (All / Received / Sent) + From/Manager/Status.	Cross-filter simultaneously by From (Sender) AND To (Manager).
12	**KPIs, PDF & Logout**	Check Manager KPI Leaderboard; Refresh; Logout.	Track your ranked KPI card (7d/14d/30d/All); Refresh; Logout.	Audit KPIs; download 1-Page Weekly Report (PDF); Logout.

SOP MODULE 1 | ACCOUNT MANAGER

Module 1: Account Manager Manual

Complete End-to-End Guide for Account Managers (Query Senders & Resolution Verifiers)

System: WMD Query & SLA Management Portal | SLA Target: 48 Hours (Extendable) | Version: 2.0

M1.1 - ROLE OVERVIEW & AUTHORIZED ACCOUNT MANAGER ACCOUNTS

As an Account Manager (AM) in the WMD Query Portal, you are the primary Query Sender and Final Verifier. You submit operational or client queries to Managers, monitor their progress against the 48-hour SLA, communicate via Sender Remarks, review Completion Date Extension requests from Managers, verify completed solutions, and provide mandatory anonymous 1-5 Star Ratings.

Key Operational Responsibilities:

- Submit clear, well-documented queries (Title + Detailed Description) assigned to the appropriate Manager.
- Monitor all queries you created via the Home Dashboard and Queries Table.
- Add or edit Sender Remarks to provide additional context, follow-ups, or feedback to the assigned Manager.
- Review and Approve or Decline "Completion Date Extension" requests submitted by Managers when external bottlenecks arise.
- Verify queries marked "Mgr Done" by checking the "Sender Done" box (or keeping it unchecked if further work is required).
- Provide a mandatory, honest 1 to 5 Star Rating on the Manager's resolution (strictly anonymous to the Manager).

User ID	Name	Login Email	Role Tab on Login	System Access Scope
am-1	Shakti	wmdklshakti@gmail.com	Account Manager	Queries created by Shakti + Manager KPI Leaderboard
am-2	Kavita	wmdklkavita@gmail.com	Account Manager	Queries created by Kavita + Manager KPI Leaderboard
am-3	Linda	wmdkllinda@gmail.com	Account Manager	Queries created by Linda + Manager KPI Leaderboard

M1.2 - GETTING STARTED: LOGGING IN & ENABLING REAL-TIME ALERTS

- Step 1 - Open Portal & Select Role Tab: Open the WMD Query Portal in your browser. On the Sign In card, click the "Account Manager" tab at the top left. (Note: If you accidentally leave "Manager" or "Admin" selected, the system will prompt: "Please select the Account Manager tab to sign in with this account.")
- Step 2 - Enter Credentials & Sign In: Enter your registered email address and 6-digit password. Click "Show" if you wish to verify your password, then click "Login". Your session is saved automatically in your current browser tab.
- Step 3 - Enable Browser & Background Notifications: Upon logging in, look for the top Notification Banner ("Enable Notifications Alerts") or click "Notifications" (bell icon) in the left sidebar. Click "Enable Alerts" / "Enable Notifications" and click "Allow" on your browser prompt. Note: You must access the portal via HTTPS (or localhost) for Web Push to work.
- Step 4 - Understand Tab Dot & Chime Alerts: Whenever a Manager adds a remark, marks a query Done, requests an extension, or a query becomes Delayed, your browser plays a two-tone audio chime and displays a red unread counter dot on the browser tab icon.

M1.3 - PORTAL NAVIGATION & SCREEN-BY-SCREEN GUIDE

Screen / Control	What You See	How Account Managers Use It
Sidebar Navigation	Home, Queries (with live open badge count), KPI, Notifications, Refresh, Collapse toggle, User Profile & Logout.	Use the badge counter on "Queries" to see how many of your submitted queries are still open. Click "Refresh" anytime to force a live database sync.
Home Dashboard	4 Top KPI Cards (Created, Completed, Pending <48h, Overdue >48h), Manager Filter dropdown, and 4 Analytics Panels.	Filter your dashboard by a specific Manager using the top "Manager" dropdown. Check "AM Queue" in Completion Rate to see how many queries are waiting on YOUR verification!

Screen / Control	What You See	How Account Managers Use It
Queries Page	Full interactive table of your queries, Filter bar (Manager, Status, Reset), "+ Add Query" button, and Date sort toggle.	Click "+ Add Query" to submit new issues. Filter by "Manager Checked" to find queries waiting for your verification, or "Extension Requested" to review deadline extensions.
KPI Page	Manager KPI Leaderboard with Time Window pills (7 Days, 14 Days, 30 Days, All Time) and Team Performance breakdown.	View how Managers are performing across 7d/14d/30d windows. Click any Manager card to highlight their stats.

M1.4 - STANDARD OPERATING PROCEDURES FOR EVERY SITUATION (12 CORE SCENARIOS)

Situation 1: Logging In & Setting Up Your Workspace [Account Manager Role]

Scenario: You are starting your shift and need to access your Account Manager portal and ensure alerts are active.

1. Select the "Account Manager" tab on the Login screen, enter your email and password, and click "Login".
2. If the yellow/orange Notification Banner appears at the top, click "Enable Alerts" so you receive desktop/mobile push notifications even when your tab is minimized.
3. Review your Home Dashboard: check the "Created" count, "Overdue" count, and look at the "AM Queue" tile (which shows queries where the Manager has marked Done and is waiting for your confirmation).

System Logic & Policy: Account Managers only see queries where they are the Sender (account_manager_id = your ID). You cannot see other Account Managers' private queries.

Situation 2: Submitting a New Query [AM as Query Sender]

Scenario: A client issue, invoice discrepancy, stock request, or operational task needs to be resolved by a specific Manager.

1. Navigate to the "Queries" page from the left sidebar and click the "+ Add Query" button at the top right.
2. In the "New Query" modal, select the target Manager from the "Send Query To (Manager)" dropdown (Muugaa, Awi, Jay, Tamil, Aizam, or Usha).
3. Enter a concise "Query Title" (e.g., "Missing Batch Expiry on Invoice #8841") and a thorough "Query Description" with all relevant details.
4. Click "Submit Query". The system automatically generates the next sequential ID (e.g., QRY-025), timestamps creation, and sets the default 48-hour SLA deadline.

System Logic & Policy: All queries can ONLY be addressed to Managers. Upon submission, the assigned Manager and Admin immediately receive a "New Query" push notification.

Situation 3: Editing or Updating Your Query Details After Submission [AM as Query Sender]

Scenario: You made a typo in the query title/description or need to add an invoice number to the original query text.

1. Locate the query row in the "Queries" table.
2. In the "Query" column, click the inline "Edit" button next to your query text.
3. Update the Query Title input and/or Query Description textarea.
4. Click "Save" (or "Cancel" to discard changes). The updated text syncs immediately in real time.

System Logic & Policy: Only the original Sender of a query can edit the Query Title and Description. The creation timestamp (createdAt) is strictly immutable and never resets when edited.

Situation 4: Adding or Updating Follow-Up Remarks (Sender vs. Manager Remarks) [AM Adding Sender Remark]

Scenario: You want to send an update, answer a Manager's question, or ask for a status check on an open query.

1. In the "Queries" table, find the "Sender Remark" column for your query and click "Edit".
2. Enter a short "Remark title..." and detailed "Remark description...", then click "Save".
3. To read the full text of either the Manager Remark or Sender Remark without truncation, click anywhere on the query row (or click the Query ID badge) to open the "View Query Details" pop-up modal.

System Logic & Policy: You can edit the "Sender Remark" column at any time. Saving a new or modified Sender Remark dispatches a real-time push notification to the assigned Manager and Admin.

Situation 5: Resolving a Query & Marking "Manager Done" [AM Waiting on Manager]

Scenario: The assigned Manager is working on your query and finishes their resolution.

1. While the Manager is working, the "Mgr Done" checkbox is read-only for you, and your "Sender Done" checkbox is locked/disabled.
2. Once the Manager resolves the issue, they are required by Director Policy to enter a Solution Remark (Title + Description) and check "Mgr Done".
3. You will receive an instant notification ("Manager Checked Done"). The row status changes to "Mgr Checked" (middle priority in table sorting), and your "Sender Done" checkbox becomes unlocked!

System Logic & Policy: Account Managers cannot check "Mgr Done", and cannot check "Sender Done" until "Mgr Done" is checked first. The exact moment the Manager checks "Mgr Done" is recorded in manager_done_at_ms for KPI turnaround calculation.

Situation 6: Handling a Query Approaching or Exceeding the 48-Hour Deadline (Need Extra Time) [AM Monitoring SLA & Extensions]

Scenario: A query is taking longer than expected due to third-party delays (e.g., waiting on bank clearance or supplier confirmation), or has crossed the 48-hour threshold.

1. If 48 hours pass from creation (or past an approved target date) without completion, the query automatically flags as "Delayed" (red pill), and the background SLA monitor sends a "Query Delayed" alert to you, the Manager, and Admin.
2. If the Manager needs legitimate extra time before completing the query, advise them to click "+ Extend" on the query row to submit a formal Completion Date Extension request to you.
3. Use the Status filter dropdown ("Delayed (Overdue)" or "Extension Requested") on the Queries page to track these items closely.

System Logic & Policy: Default SLA is exactly 48 hours from creation. However, if the Manager requests an extension and you approve it, the new proposed date becomes the official target deadline and clears the Delayed status!

Situation 7: Reviewing & Approving or Declining a Completion Date Extension Request [AM as Extension Approver]

Scenario: A Manager has requested extra time on your query, displaying an orange "[Ext] Ext Req" pill and a "Review Ext [Ext]" action button.

1. Click the "Review Ext [Ext]" button in the Status column (or open the Query Details modal by clicking the row).
2. In the "Review Extension Request" modal, inspect the Manager's "Proposed New Deadline" and read the "Manager's Reason".
3. To APPROVE: Click "[OK] Approve Extension". The query's Target Completion deadline updates to the proposed date, the status pill shows "Extended", and any Delayed flag is cleared so the Manager's KPI stays on-time.
4. To DECLINE: Enter an optional feedback note in "Note / Feedback" (e.g., "Client needs this by 5 PM today, cannot extend") and click "[X] Decline Request". The original 48-hour deadline remains enforced.

System Logic & Policy: Peer Accountability Rule: Only the Query Sender (or Admin) can approve or decline an extension request. The Manager receives an instant push notification of your decision.

Situation 8: Verifying Resolution & Mandatory 1-5 Star Rating ("Sender Done") [AM Verifying & Completing Query]

Scenario: The Manager has marked "Mgr Done" and provided their solution remark. You have verified that the issue is genuinely resolved.

1. Read the Manager's solution in the "Manager Remark" column (or click the row to view the full description).
2. Click the "Done" checkbox in the "Sender Done" column.
3. If you have not rated the Manager on this query yet, the "Rate Manager" modal pops up automatically.
4. Select 1 to 5 stars based on the quality and speed of the Manager's resolution, then click "Submit Rating & Complete".
5. Both "Mgr Done" and "Sender Done" are now checked! The query status turns green ("Completed"), moves to the bottom of the queue, and records the final completion timestamp.

System Logic & Policy: A query is ONLY "Completed" when BOTH Manager Done and Sender Done are checked. A 1-5 Star Rating is mandatory before Sender Done can be completed.

Situation 9: What If the Manager's Resolution Is Incomplete or Unsatisfactory? [AM Rejecting Incomplete Resolution]

Scenario: The Manager checked "Mgr Done", but when you checked the invoice/stock, part of the problem is still unresolved.

1. Do NOT check the "Sender Done" box! (If you already checked "Sender Done" by mistake, click "Sender Done" again to uncheck it - this immediately reverts the query status from "Completed" back to "Mgr Checked" / Pending).
2. Click "Edit" in the "Sender Remark" column and write a clear explanation of what is still missing or incorrect.
3. Click "Save". The Manager receives a notification with your remark and sees that the query is still open.
4. If the Manager unchecks their own "Mgr Done" box to rework the issue, the system automatically unchecks "Sender Done" as well.

System Logic & Policy: Dual-Check Safeguard: Managers cannot close queries unilaterally. As long as "Sender Done" remains unchecked, the query stays open in the active queue.

Situation 10: Updating or Changing a Manager Rating Anytime (Strict Anonymity Rules) [AM Managing Ratings]

Scenario: You want to rate a Manager before completion, or you want to change a 1-5 star rating you previously submitted.

1. In the "Rating" column of the Queries table, you will see either a "* Rate" button (if unrated) or your current gold star badge (e.g., "**** 4/5").
2. Click the "* Rate" button or click your existing star badge anytime (even after the query is Completed).
3. Select your new star rating (1 to 5 stars) in the modal and click "Save Rating" / "Update Rating".

System Logic & Policy: Strict Anonymity Guarantee: The receiving Manager NEVER sees individual query ratings (they only see " - " in the Rating column). Only you (the Sender) and the Admin can see individual query ratings. Managers only see their aggregated average rating on the KPI page.

Situation 11: Filtering, Sorting & Inspecting Queries in the Portal [AM Queue Management]

Scenario: You have dozens of queries and need to quickly find specific items (e.g., overdue items for Manager Jay, or items awaiting your verification).

1. On the "Queries" page, use the "Manager" dropdown to filter by a specific assigned Manager.
2. Use the "Status" dropdown to filter by: "Pending (On Track)", "Extension Requested [Ext]", "Unchecked", "Manager Checked" (your action queue!), "Delayed (Overdue)", or "Completed".
3. Click the "Date v/^" column header to toggle between newest-first and oldest-first sorting within each priority stage.
4. Click "Reset" whenever filters are active to return to the default view.

System Logic & Policy: Automatic 3-Tier Priority Sorting: The table always groups (1) Unchecked queries at the very top, (2) Manager Checked queries in the middle, and (3) Completed queries at the bottom.

Situation 12: Monitoring KPIs, Refreshing Live Data & Logging Out [AM Analytics & Shift End]

Scenario: You want to check how responsive each Manager is over the past week, sync data, or wrap up your work session.

1. Click "KPI" in the left sidebar to view the Manager KPI Leaderboard. Toggle between "7 Days", "14 Days", "30 Days", and "All Time" at the top right.
2. Review each Manager's Overall KPI %, Completion Rate, Average Rating, and Avg Response hours.
3. If your network connection was briefly interrupted, click the "Refresh" button in the sidebar to force a fresh sync from Supabase.
4. When finished with your shift, click the "Logout" button at the bottom of the left sidebar to clear your active session.

System Logic & Policy: Your honest ratings and timely verifications directly feed the Manager KPI Leaderboard and help track Sender Verification latency.

M1.5 - SLA DEADLINES, EXTENSION RULES & KPI SCORING FORMULAS

- Default 48-Hour SLA Deadline: Every query starts with a 48-hour target deadline from its creation timestamp (createdAt + 48 hours).
- Approved Extension Override: When you approve a Manager's extension request, targetDueAtMs updates to the approved date/time, and all on-time/delay evaluations use that new deadline.
- How Your Ratings Impact Manager KPI: A Manager's "Overall KPI %" is the 50/50 average of their Turnaround KPI % and their Average Star Rating Percentage ((Avg Rating / 5.0) x 100). For example, 90% Turnaround + 4.5 Stars (90%) = 90% Overall KPI.
- Turnaround Point System (Evaluated when Manager marks Done): Completed On-Time (<= deadline) = +1.0 pt | Completed Late (> deadline) = +0.5 pt | Open & Overdue (> deadline) = 0.0 pt | Open & In-Progress (<= deadline) = Excluded until deadline passes or Manager finishes.

M1.6 - NOTIFICATION MATRIX, TROUBLESHOOTING & END-OF-SHIFT CHECKLIST

Portal Event	Trigger Action	Who Gets Notified	Your Expected Action
Manager Remark Added	Assigned Manager saves a new/updated remark	You (Sender AM) + Admin	Read the Manager's remark and reply via Sender Remark if needed.
Manager Checked Done	Assigned Manager checks "Mgr Done"	You (Sender AM) + Admin	Verify the solution, check "Sender Done", and submit 1-5 Star Rating.
Extension Requested	Assigned Manager requests new target date	You (Sender AM) + Admin	Click "Review Ext [Ext]" to Approve or Decline the proposed date.
Query Delayed (>48h)	Query passes deadline without Manager Done	You (Sender AM) + Manager + Admin	Follow up with the Manager or review any pending extension request.

Daily Closing & Logout Procedure (Till the Very End):

- Before logging out, filter the Queries page by Status = "Manager Checked" and verify + rate all resolved queries so Managers receive credit and queries close cleanly.
- Filter by Status = "Extension Requested [Ext]" to ensure no Manager is left waiting on a deadline extension decision.
- Always provide constructive details in "Sender Remark" if you decide to leave "Sender Done" unchecked after a Manager marks "Mgr Done".
- Click "Logout" in the bottom-left sidebar when leaving your workstation.

SOP MODULE 2 | MANAGER (RECEIVER & SENDER)

Module 2: Manager (Receiver & Sender) Manual

Complete End-to-End Guide for Managers - Acting as Both Query Receiver AND Query Sender

System: WMD Query & SLA Management Portal | SLA Target: 48 Hours (Extendable) | Version: 2.0

M2.1 - ROLE OVERVIEW & AUTHORIZED MANAGER (RECEIVER & SENDER) ACCOUNTS

As a Manager in the WMD Query Portal, you hold a unique DUAL ROLE. (1) As a QUERY RECEIVER (Assigned Manager), you receive queries from Account Managers and from fellow Managers, provide mandatory Solution Remarks, request Completion Date Extensions when needed, and mark "Mgr Done" within the 48-hour SLA to protect your KPI score. (2) As a QUERY SENDER, you can submit queries to other Managers, add Sender Remarks, approve/decline extension requests on queries you sent, verify resolutions ("Sender Done"), and rate the receiving Manager (1-5 Stars).

Key Operational Responsibilities:

- AS A RECEIVER (Assigned to You): Resolve assigned queries within 48 hours, document solutions in "Manager Remark" (mandatory before checking "Mgr Done"), and request extensions early if external bottlenecks occur.
- AS A SENDER (Created by You): Submit inter-manager queries to fellow Managers, follow up via "Sender Remark", review extension requests from the receiving Manager, check "Sender Done" once verified, and submit anonymous 1-5 Star Ratings.
- Use the "View" scope filter on the Queries page ("All Queries", "Received (Assigned)", "Sent (By Me)") to seamlessly switch between your Receiver queue and Sender queue.
- Track your Rolling 7-Day Weighted KPI Score on the Home Dashboard and compare performance on the Manager KPI Leaderboard.

User ID	Name	Login Email	Role Tab on Login	System Access Scope
mgr-1	Muugaa	cs4@malayanfood.com	Manager	Assigned Queries (Receiver) + Sent Queries (Sender) + KPI
mgr-2	Awi	cs3@malayanfood.com	Manager	Assigned Queries (Receiver) + Sent Queries (Sender) + KPI
mgr-3	Jay	wmgjay09@gmail.com	Manager	Assigned Queries (Receiver) + Sent Queries (Sender) + KPI
mgr-4	Tamil	info@malayanfood.com	Manager	Assigned Queries (Receiver) + Sent Queries (Sender) + KPI
mgr-5	Aizam	wmgaizam@gmail.com	Manager	Assigned Queries (Receiver) + Sent Queries (Sender) + KPI
mgr-6	Usha	wmdusha@gmail.com	Manager	Assigned Queries (Receiver) + Sent Queries (Sender) + KPI

M2.2 - GETTING STARTED: LOGGING IN & ENABLING REAL-TIME ALERTS

- Step 1 - Open Portal & Select the "Manager" Tab: On the WMD Query Portal Sign In page, click the middle "Manager" tab. (If you leave "Account Manager" or "Admin" selected, login will be rejected with a prompt to switch to the Manager tab.)
- Step 2 - Sign In with Your Manager Email & Password: Enter your authorized email (e.g., cs4@malayanfood.com, cs3@malayanfood.com, wmgjay09@gmail.com, etc.) and 6-digit password, then click "Login".
- Step 3 - Activate Real-Time Notifications: Click "Enable Alerts" on the top banner or open "Notifications" in the sidebar and click "Enable Notifications". Because your KPI depends on 48-hour turnaround speed, keeping browser/desktop alerts enabled ensures you never miss a newly assigned query.
- Step 4 - Understand Your Dual-Role Badges: In the Queries table, look for the "(You)" tag next to your name. When "(You)" appears in the "Assigned Mgr" column, you are the RECEIVER. When "(You)" appears in the "From (Sender)" column (with a "Mgr" badge), you are the SENDER.

M2.3 - PORTAL NAVIGATION & SCREEN-BY-SCREEN GUIDE

Screen / Control	What You See	How Manager (Receiver & Sender)s Use It
Sidebar Navigation	Home, Queries (badge shows total open queries both Received & Sent), KPI, Notifications, Refresh, User Card & Logout.	Check the open badge count daily. Use "Refresh" to sync the latest updates from Supabase at any time.
Home Dashboard	5 Top KPI Cards (Received, Completed, Pending, Overdue, plus your 5th Card: "Rolling 7d Average KPI %"), "From" Sender filter, and 4 Charts.	Your Home Dashboard metrics focus on queries RECEIVED by you. Click your 5th KPI Card ("Average KPI") to jump straight to the KPI Leaderboard. Toggle the 3rd chart between "Managers" (Peer Managers) and "AMs" (Account Managers).
Queries Page ("View" Filter)	Special Manager-only "View" filter ("All Queries", "Received (Assigned)", "Sent (By Me)"), plus "From", "Manager", "Status" filters, and "+ Add Query".	Switch "View" to "Received (Assigned)" to focus on work you need to complete. Switch "View" to "Sent (By Me)" to verify and rate queries you sent to other Managers!
KPI Page	Live Manager Leaderboard ranked #1 to #6 with medals, Overall KPI %, Completion Rate (Turnaround KPI %), Average Rating, and Avg Response hours.	Your own card is highlighted with a "You" badge. Switch between 7 Days, 14 Days, 30 Days, and All Time to track your standing.

M2.4 - STANDARD OPERATING PROCEDURES FOR EVERY SITUATION (12 CORE SCENARIOS)

Situation 1: Logging In & Setting Up Your Workspace [Manager Dual Role]

Scenario: You are starting your shift and need to check your incoming workload, your 7-day KPI score, and queries you sent to other Managers.

1. Select the "Manager" tab on the Sign In screen, enter your email and password, and click "Login".
2. Verify notifications are active (click "Notifications" in the sidebar -> ensure status shows " Active").
3. On the Home Dashboard, check your 5th KPI card ("Rolling 7d Average KPI") and check "Mgr Queue" (items waiting on your action) vs. "AM Queue" (items you marked Done that are waiting on the Sender to verify).

System Logic & Policy: On the Home Page, your top KPI counters reflect queries assigned to you (Received). On the Queries Page, you see BOTH queries assigned to you AND queries you created and sent to other Managers.

Situation 2: Submitting a New Query (Manager Acting as Sender) [Manager as Sender]

Scenario: You need another Manager in a different department/branch to resolve an operational issue or verify stock/accounts.

1. Go to the "Queries" page and click the "+ Add Query" button at the top right.
2. In the "Send Query To (Manager)" dropdown, the system automatically filters out your own name and lists the other 5 Managers so you can assign it to a peer Manager.
3. Enter a clear "Query Title" and detailed "Query Description", then click "Submit Query".
4. In the table, this query will display your name in the "From (Sender)" column with a purple "Mgr" role tag and "(You)".

System Logic & Policy: When you create a query, you become the Sender (stored in account_manager_id). For this specific query, you have all the rights and duties of a Sender (editing query text, adding Sender Remarks, approving extensions, checking Sender Done, and rating the receiving Manager).

Situation 3: Editing or Updating Query Details After Submission [Sender vs. Receiver Rules]

Scenario: The original query title or description needs to be clarified or corrected.

1. IF YOU SENT THE QUERY (Sender): Click the "Edit" button in the "Query" column, update the Title or Description, and click "Save".
2. IF YOU RECEIVED THE QUERY (Assigned Manager): You cannot edit the Sender's original Query text (it is read-only to preserve audit integrity). If the query is unclear, ask the Sender to clarify or log your notes in "Manager Remark".

System Logic & Policy: Only the query creator/sender can edit the "Query" column. Assigned Managers edit the "Manager Remark" column.

Situation 4: Adding or Updating Remarks (Manager Remark vs. Sender Remark) [Receiver & Sender Perspectives]

Scenario: You need to post progress updates, document findings, or communicate with the other party on a query.

1. IF YOU ARE THE RECEIVER (Assigned Manager): Go to the "Manager Remark" column and click "Edit". Enter a Remark Title and Description (e.g., "Checked with warehouse, replacement scheduled") and click "Save". The Sender and Admin are notified immediately.
2. IF YOU ARE THE SENDER (Sent to another Manager): Go to the "Sender Remark" column and click "Edit". Enter your follow-up note and click "Save". The Assigned Manager and Admin are notified immediately.

System Logic & Policy: Permissions are strictly column-bound per query: the Assigned Manager controls "Manager Remark", while the Sender controls "Sender Remark".

Situation 5: Resolving a Query & Marking "Manager Done" (Mandatory Solution Remark Policy) [Manager as Receiver]

Scenario: You have resolved a query assigned to you and want to mark "Mgr Done" to stop your turnaround clock and earn KPI points.

1. Locate the query where you are the "Assigned Mgr (You)".
2. Click the "Done" checkbox in the "Mgr Done" column.
3. DIRECTOR POLICY ENFORCEMENT: If you have not entered a Manager Remark yet, the system blocks the checkbox and automatically opens the "Solution Remark Required" modal!
4. In the modal, enter a "Remark Title *" and "Solution / Resolution Description *" explaining how you fixed the issue, then click "Save Remark & Mark Done".
5. The query status changes to "Mgr Checked", your turnaround time is locked in (manager_done_at_ms), and the Sender is notified to verify your work.

System Logic & Policy: Anti-Cheat Turnaround Tracking: Your KPI turnaround time is measured from Query Creation to the exact moment YOU mark "Mgr Done" (not when the Sender verifies it later). This ensures you are never penalized if the Sender takes a long time to click "Sender Done"!

Situation 6: Requesting a Completion Date Extension When Extra Time Is Needed [Manager as Receiver]

Scenario: You received a complex query (e.g., waiting on bank investigation or external supplier) that cannot be finished within the standard 48-hour SLA.

1. Do NOT let the query sit unaddressed! In the "Status" column of the query row, click the "+ Extend" link button (or open the Query Details modal and click "[Ext] Request Completion Date Extension").
2. In the "Request Completion Date Extension" modal, pick a realistic future date and time in "Proposed New Completion Date & Time *" (defaults to 3 days ahead at 18:00).
3. Type a clear explanation (minimum 5 characters) in "Reason for Extension *" (e.g., "Waiting on supplier credit note confirmation").
4. Click "Send Request to Sender". An orange "[Ext] Ext Req" badge appears on the query, and the Sender + Admin receive an instant alert.

System Logic & Policy: If the Sender (or Admin) approves your extension request, your query's Target Completion deadline updates to the new date, any "Delayed" flag is cleared, and completing the query before the new deadline earns you the full +1.0 On-Time KPI point!

Situation 7: Reviewing & Approving/Declining an Extension Request (When You Are the Sender) [Manager as Sender]

Scenario: You sent a query to another Manager, and that Manager has requested a completion date extension from you.

1. You will receive an "[Ext] Extension Requested" alert. Set your Queries page "View" filter to "Sent (By Me)" or "Status" filter to "Extension Requested [Ext]".
2. Click the "Review Ext [Ext]" button in the Status column of that query.
3. Review your fellow Manager's proposed deadline and reason.
4. Click "[OK] Approve Extension" to grant the new deadline, OR enter a note and click "[X] Decline Request" if the deadline cannot be moved.

System Logic & Policy: When you act as a Sender, you hold the exact same extension approval authority over the receiving Manager as an Account Manager does.

Situation 8: Verifying Resolution & Mandatory 1-5 Star Rating (Receiver vs. Sender) [Dual Perspective]

Scenario: A query has been marked "Mgr Done" and now needs final verification and closure ("Sender Done").

1. WHEN YOU ARE THE RECEIVER: After you check "Mgr Done", you wait for the Sender (AM or fellow Manager) to verify your work and check "Sender Done". Once they do, you receive a " Query Completed" notification.
2. WHEN YOU ARE THE SENDER: After the assigned Manager marks "Mgr Done" on a query you sent, review their Manager Remark. Click "Done" in the "Sender Done" column, select a 1 to 5 Star Rating in the pop-up modal, and click "Submit Rating & Complete".

System Logic & Policy: A Manager CANNOT check "Sender Done" on a query assigned to themselves - only the Sender who created the query can verify and rate it.

Situation 9: Handling Rework or Unchecking "Mgr Done" When Resolution Needs Fixing [Receiver & Sender Perspectives]

Scenario: After "Mgr Done" was checked, either you realized more work is needed, or the Sender added a Sender Remark asking for corrections.

1. IF YOU ARE THE RECEIVER: Read the Sender's feedback in "Sender Remark". If you need to reopen the task while working on it, you can uncheck "Mgr Done" (which automatically unchecks "Sender Done" if it was checked). Update your "Manager Remark" once fixed and re-check "Mgr Done".
2. IF YOU ARE THE SENDER: If the assigned Manager marked "Mgr Done" prematurely, leave "Sender Done" unchecked and add a "Sender Remark" detailing what still needs to be resolved.

System Logic & Policy: Database Trigger Rule: Whenever manager_done is set to FALSE, account_manager_done is automatically reset to FALSE, status reverts to "Pending", and manager_done_at resets until marked Done again.

Situation 10: Understanding Rating Anonymity (As Receiver vs. As Sender) [Strict Anonymity Policy]

Scenario: How the 1-5 Star Rating column behaves depending on whether you received or sent the query.

1. FOR QUERIES RECEIVED BY YOU: The "Rating" column in the Queries table always displays " - ". You can NEVER see which individual rating a Sender gave you on a specific query. Instead, you see your combined "Average Rating (* X.X / 5.0)" across all rated queries on the KPI Page.
2. FOR QUERIES SENT BY YOU: You CAN see and click the "* Rate" button or your gold star badge ("**** 4/5") in the Rating column, and you can update your rating of the receiving Manager at any time.

System Logic & Policy: This strict anonymity design prevents workplace friction while still allowing fair quality feedback to factor into each Manager's Overall KPI score.

Situation 11: Using the Manager "View" Scope Filter & Managing Your Dual Queue [Manager Queue Mastery]

Scenario: Because you both receive and send queries, you need an organized way to separate your daily tasks.

1. On the "Queries" page, use the first dropdown labeled "View":
2. Select "Received (Assigned)" first thing every morning: this shows ONLY queries assigned to you so you can resolve them and mark "Mgr Done".
3. Select "Sent (By Me)" in the afternoon: this shows ONLY queries you sent to other Managers so you can review extension requests, verify "Mgr Checked" items, and mark "Sender Done".
4. Use the "From" filter to filter incoming queries by a specific Account Manager or peer Manager.

System Logic & Policy: The "View" scope filter (All Queries / Received / Sent) is a dedicated feature built exclusively for the Manager role.

Situation 12: Tracking Your KPI Leaderboard Score, Refreshing & Logging Out [Manager Performance & Shift End]

Scenario: You want to understand how your KPI ranking is calculated and close out your shift cleanly.

1. Navigate to the "KPI" page from the sidebar. Locate your scorecard (marked with a "You" badge and rank medal #1/#2/#3/#).
2. Inspect your two KPI pillars: "Completion Rate" (Turnaround KPI % based on On-Time +1.0 and Late +0.5 points) and "Average Rating" (* out of 5.0), which combine into your "Overall KPI %".
3. Check your 4 stat capsules: On-Time, Late, Overdue, and Delayed, plus your "Avg Response" time in hours.
4. Before logging out via the sidebar "Logout" button, ensure all resolved queries have "Mgr Done" checked and any blocked queries have an extension requested.

System Logic & Policy: Anti-Cheat Rolling Window Rule: While the default KPI view is "7 Days", any open OVERDUE query (>48h without Manager Done) remains locked in your 7-day KPI evaluation even after 7 days pass, until you resolve it!

M2.5 - SLA DEADLINES, EXTENSION RULES & KPI SCORING FORMULAS

- Turnaround KPI Points (Based on when YOU check "Mgr Done"): On-Time (<= 48h or <= Approved Extension Date) = +1.0 pt | Late (> 48h / deadline) = +0.5 pt | Open & Overdue (> 48h / deadline and not Mgr Done) = 0.0 pt | In-Progress (Open and within deadline) = Excluded (no penalty while you are still within your 48h window).
- Turnaround KPI Formula: (Earned Points / Total Evaluated Queries) x 100. Example: 8 On-Time (8.0 pts) + 2 Late (1.0 pt) + 0 Overdue = 9.0 / 10 = 90% Turnaround KPI.
- Overall KPI Formula: Average of your Turnaround KPI % and your Average Star Rating Percentage ((Avg Rating / 5.0) x 100). If you have no ratings yet in the time window, Overall KPI equals your Turnaround KPI %.
- Why Requesting Extensions Matters: If a query is delayed due to external factors and you request an extension that the Sender approves, the query is evaluated against the NEW deadline (+1.0 pt instead of 0.0 or +0.5 pt!).

M2.6 - NOTIFICATION MATRIX, TROUBLESHOOTING & END-OF-SHIFT CHECKLIST

Portal Event	Trigger Action	Who Gets Notified	Your Expected Action
New Query Assigned	An AM or peer Manager assigns a query to you	You (Assigned Manager) + Admin	Review the query details and plan resolution within 48 hours.
Sender Added Remark	The Sender adds/updates a Sender Remark	You (Assigned Manager) + Admin	Read the Sender's remark and respond via Manager Remark.
Extension Approved / Declined	Sender reviews your extension request	You (Assigned Manager) + Admin	Note your updated target completion deadline (or expedite if declined).
Query Completed	Sender checks "Sender Done" & rates resolution	You (Assigned Manager) + Admin	Query is officially closed!
Manager Done / Ext Req (On Queries You Sent)	Assigned Manager updates a query YOU sent	You (as Sender Manager) + Admin	Switch View to "Sent (By Me)" to verify completion or review extension.

Daily Closing & Logout Procedure (Till the Very End):

- Start your day on Queries -> View: "Received (Assigned)" -> Status: "Unchecked" or "Delayed" to clear urgent work.
- Never forget to enter a detailed Solution Remark when checking "Mgr Done" - it helps the Sender verify faster and improves your anonymous star rating!
- If a task will take >48 hours due to external dependencies, click "+ Extend" BEFORE the 48-hour clock expires.
- Before logging out, switch View to "Sent (By Me)" to verify and rate any queries your fellow Managers completed for you.

SOP MODULE 3 | ADMIN (DIRECTOR & SYSTEM GOVERNANCE)

Module 3: Admin (Director & System Governance) Manual

Complete End-to-End Guide for Administrators - Full-System Oversight, SLA Governance, KPI Auditing & Weekly PDF Reporting

System: WMD Query & SLA Management Portal | SLA Target: 48 Hours (Extendable) | Version: 2.0

M3.1 - ROLE OVERVIEW & AUTHORIZED ADMIN (DIRECTOR & SYSTEM GOVERNANCE) ACCOUNTS

As an Administrator (Admin / Director) in the WMD Query Portal, you have unrestricted, global visibility and supervisory control across all Account Managers and Managers. You monitor company-wide query volume, receive real-time alerts for EVERY event across the portal, audit individual anonymous sender ratings, intervene on pending Completion Date Extension requests, generate the 1-Page Executive Weekly Manager Summary PDF Report, and manage database initialization if required.

Key Operational Responsibilities:

- Monitor global query flow across all 3 Account Managers and 6 Managers using dual "From (Sender)" and "Manager" filters.
- Audit individual 1-5 Star Sender Ratings on every query (Admin is the only role that can see ALL ratings alongside who sent them and who received them).
- Review and Approve or Decline pending "Completion Date Extension" requests whenever supervisory intervention is needed.
- Submit queries directly to any Manager or toggle "Mgr Done" / "Sender Done" overrides if administrative correction is required.
- Evaluate Manager performance across 7-Day, 14-Day, 30-Day, and All-Time windows on the KPI Leaderboard.
- Generate and download the 1-Page "Weekly Report (PDF)" from the Home Dashboard for executive management meetings.

User ID	Name	Login Email	Role Tab on Login	System Access Scope
adm-1	Teja	admin1@gmail.com	Admin	Global Full Access: All Queries, All Ratings, All Extensions, KPI & PDF Report

M3.2 - GETTING STARTED: LOGGING IN & ENABLING REAL-TIME ALERTS

- Step 1 - Open Portal & Select the "Admin" Tab: On the WMD Query Portal Sign In screen, click the "Admin" tab on the far right. (Attempting to sign in with admin1@gmail.com under the Account Manager or Manager tab will display a role tab reminder.)
- Step 2 - Enter Admin Credentials & Sign In: Enter admin1@gmail.com and your 6-digit password, then click "Login".
- Step 3 - Enable Global Real-Time Notifications: Click "Enable Alerts" on the top banner or open "Notifications" in the sidebar. As Admin, your account is subscribed to receive real-time browser and background push notifications for ALL events across all users.
- Step 4 - Database Health Banner Check (Admin Exclusive): If the Supabase database tables are ever uninitialized, a top alert banner ("Database tables not initialized") appears with a "Copy SQL" button so you can copy the complete schema from supabase_schema.sql in one click.

M3.3 - PORTAL NAVIGATION & SCREEN-BY-SCREEN GUIDE

Screen / Control	What You See	How Admin (Director & System Governance)s Use It
Sidebar Navigation	Home, Queries (badge shows total open queries company-wide), KPI, Notifications, Refresh, Collapse toggle, User Profile & Logout.	The badge count on "Queries" shows the total unresolved queries across the entire organization. Use "Refresh" to sync live data before generating reports.
Home Dashboard	5 Executive KPI Cards (Total, Completed, Pending <48h, Overdue >48h, plus "Rolling 7d Team Avg KPI %"), "Weekly Report (PDF)" button, dual "From" & "Manager" filters, and 4 Analytics Panels.	Use the "From" (All Senders) and "Manager" (All Managers) dropdowns together to slice metrics by any pair of users. Click "Weekly Report (PDF)" to download a 1-page executive summary.
Queries Page	Complete company-wide table of all queries, "From" filter, "Manager" filter, "Status" filter,	Inspect any query in full detail, view every Sender's star rating in the "Rating" column, and use "Review Ext [Ext]" or

Screen / Control	What You See	How Admin (Director & System Governance)s Use It
	"Reset", and "+ Add Query".	"+ Extend" to manage deadlines.
KPI Page	Ranked Manager KPI Leaderboard (#1 to #6), Time Window selector (7d / 14d / 30d / All Time), and Team Performance Comparison panel.	Audit Manager Turnaround KPI %, Average Star Ratings, Avg Response Hours, and Delayed counts across any time horizon.

M3.4 - STANDARD OPERATING PROCEDURES FOR EVERY SITUATION (12 CORE SCENARIOS)

Situation 1: Logging In & Executive Workspace Overview [Admin Global View]

Scenario: You are logging in to review company-wide SLA health, team KPI averages, and any overdue bottlenecks.

1. Select the "Admin" tab on the Sign In screen, enter admin1@gmail.com and password, and click "Login".
2. On the Home Dashboard, review the 5 top cards: Total Queries, Completed, Pending (<48h), Overdue (>48h), and the 5th card showing "Team Avg KPI (Rolling 7d)".
3. In the "Peer Managers / Account Managers" panel (Panel 3), toggle between the "Managers" tab and "AMs" tab to compare resolution rates by Manager or by Account Manager.

System Logic & Policy: Admin has zero visibility restrictions: every query created by any Account Manager or Manager is visible in your dashboard and tables.

Situation 2: Submitting a New Query (Admin Direct Assignment) [Admin as Query Creator]

Scenario: You (Admin/Director) want to log an executive query or task directly for a specific Manager to resolve.

1. Navigate to the "Queries" page and click "+ Add Query" at the top right.
2. Select the target Manager from the "Send Query To (Manager)" dropdown.
3. Enter the "Query Title" and "Query Description", then click "Submit Query".
4. Your query is logged with "Teja [Admin] (You)" in the "From (Sender)" column, and dispatches an immediate push alert to the assigned Manager.

System Logic & Policy: When Admin creates a query, Admin acts as the Sender for that query and can edit the query text, add Sender Remarks, check Sender Done, and rate the Manager.

Situation 3: Auditing or Editing Query Details [Admin Audit & Control]

Scenario: You want to inspect the full title and description of any query in the system, or edit a query that you created.

1. Click anywhere on a query row (or click the Query ID pill, e.g., QRY-012) on either the Home Dashboard ("Recent Queue") or the Queries Page.
2. The "View Query Details" modal opens, displaying the creation timestamp, completion timestamp, Sender, Assigned Manager, full Query Title & Description, Target Completion status, and both Remarks.
3. If you are the Sender of that query, you can also click inline "Edit" in the "Query" column to modify its text.

System Logic & Policy: To preserve audit accountability between staff, inline text editing of someone else's Query Title/Description is reserved for the original Sender.

Situation 4: Monitoring & Auditing Manager Remarks and Sender Remarks [Admin Communication Audit]

Scenario: You are investigating a dispute or delay on a query and need to see what the Manager and Sender communicated to each other.

1. In the Queries table, view the "Manager Remark" and "Sender Remark" columns side-by-side.
2. Click the row to open the "View Query Details" modal, where both remarks are displayed in full with their respective Title, Description, and check tags ("[OK] Mgr Done" / "[OK] Sender Done").
3. Every time any Manager or Sender adds or updates a remark, you receive a live browser/push notification quoting their remark.

System Logic & Policy: Both Manager Remarks and Sender Remarks store a structured Title and Description so communications remain clear and auditable.

Situation 5: Enforcing & Auditing the "Manager Done" Solution Remark Policy [Admin Policy Governance]

Scenario: Ensuring Managers do not mark queries "Done" without explaining what action was taken, and understanding administrative overrides.

1. By Director Policy, whenever an assigned Manager clicks "Mgr Done" without a remark, the system forces them to complete the "Solution Remark Required" modal (Title + Description).
2. In the code logic (handleToggleManagerDone), Admin also has backend permission to toggle "Mgr Done" (or "Sender Done") when acting on a query.
3. You can verify the exact timestamp a Manager marked Done via the anti-cheat manager_done_at tracking, which separates Manager resolution speed from Sender verification delay.

System Logic & Policy: The database trigger (enforce_query_rules) guarantees that created_at is never altered on update and records Asia/Kuala_Lumpur timestamps when Manager Done and Completed states are reached.

Situation 6: Monitoring Queries Exceeding 48 Hours & Initiating Extensions [Admin SLA Supervision]

Scenario: A query has exceeded 48 hours (flagged "Delayed"), or you want to proactively extend a deadline for a Manager.

1. On the Queries page, set the "Status" filter to "Delayed (Overdue)" to view all queries that breached their 48-hour SLA.
2. You also receive automatic " Query Delayed" push alerts from the background SLA Delay Checker whenever an open query crosses its deadline without Manager completion.
3. As Admin, you see the "+ Extend" button on ALL open queries (unless an extension is already pending). You can click "+ Extend" on any query to propose an extended deadline on behalf of a Manager.

System Logic & Policy: Once a query is Completed, if it exceeded its target deadline at the time of completion, its "Delayed" badge remains permanently recorded for historical accuracy.

Situation 7: Reviewing & Approving or Declining Any Extension Request (Admin Override) [Admin as Global Approver]

Scenario: A Manager has requested a Completion Date Extension ("[Ext] Ext Req"), and either the Sender is unavailable or executive approval is required.

1. Filter the Queries table by Status = "Extension Requested [Ext]".
2. As Admin, you have full authority to review EVERY pending extension request in the system! Click the "Review Ext [Ext]" button in the Status column (or open the Query Details modal).
3. Inspect the proposed completion date and the Manager's reason.
4. Click "[OK] Approve Extension" to immediately update the query's target deadline and clear any Delayed status, OR enter a review note and click "[X] Decline Request".

System Logic & Policy: Both the original Query Sender AND the Admin can approve or decline any pending extension request. Approving resets local delay notification caches and updates targetDueAtMs.

Situation 8: Auditing Final Query Completion ("Sender Done" & Dual-Check Closure) [Admin Completion Audit]

Scenario: Tracking which queries are waiting on Manager action versus waiting on Sender verification.

1. On the Home Dashboard, check Panel 2 ("Completion Rate"): compare "Mgr Queue" (unchecked queries waiting on Managers) against "AM Queue" (queries where Managers finished, waiting on Senders to verify and rate).
2. On the Queries page, filter by Status = "Manager Checked" to see if any Account Manager or Sender Manager is bottlenecking closures by failing to verify completed work.

System Logic & Policy: In the KPI engine, average Sender Verification latency (completedAtMs minus managerDoneAtMs) is tracked separately so slow Sender verification never hurts a Manager's Turnaround KPI.

Situation 9: Handling Disputed Resolutions or Reopened Queries [Admin Dispute Resolution]

Scenario: A Manager marked a query "Mgr Done", but the Sender refuses to check "Sender Done" due to a disagreement over the resolution.

1. Open the Query Details modal for the disputed query and read both the "Manager Remark" and the "Sender Remark".
2. Check whether an extension is needed or if the Manager needs to perform additional steps.
3. Instruct the Manager to update their solution remark (or uncheck "Mgr Done" while reworking), or instruct the Sender to complete verification once satisfied.

System Logic & Policy: If "Mgr Done" is unchecked at any point, the system automatically unchecks "Sender Done" and reverts the status from "Completed" to "Pending".

Situation 10: Auditing All Individual 1-5 Star Ratings (Admin Visibility Privilege) [Admin Exclusive Rating Visibility]

Scenario: You want to see the exact star rating (1 to 5 stars) given on each individual query and identify why a Manager's average rating rose or fell.

1. Look at the "Rating" column in the Queries table. Unlike Managers (who only see " - "), Admin sees a green/gold star badge (e.g., "***** 5/5" or "** 2/5") on every rated query!
2. Hover over the rating badge in the table (or open the Query Details modal) to see the exact tooltip: "Rated X/5 stars by sender (Sender Name)".
3. Use this insight during 1-on-1 performance reviews to correlate low ratings with specific query histories.

System Logic & Policy: Visibility Matrix for Individual Query Ratings: Admin = Sees ALL ratings | Sender = Sees & edits their own rating | Receiving Manager = Hidden (" - ") for strict anonymity.

Situation 11: Cross-Filtering by Both Sender ("From") AND Assigned Manager ("To") [Admin Matrix Filtering]

Scenario: You want to analyze the exact query traffic between one specific Sender (e.g., Shakti or Manager Awi) and one specific receiving Manager (e.g., Manager Muugaa).

1. On either the Home Dashboard or the Queries Page, use the "From" dropdown to select any Sender (Account Managers are labeled "(AM)" and Managers are labeled "(Mgr)").
2. Simultaneously, use the "Manager" dropdown to select any receiving Manager.
3. On the Home Dashboard, all 4 KPI cards, the Status Breakdown chart, Completion Rate gauges, and Recent Queue immediately recalculate for that exact Sender-to-Manager pair!

System Logic & Policy: Admin is the only role with simultaneous access to both the global "From (All Senders)" filter and the global "Manager (All Managers)" filter across all views.

Situation 12: Generating the Weekly Executive PDF Report & Reviewing KPI Leaderboards [Admin Executive Reporting]

Scenario: You are preparing for the weekly management meeting and need a clean, printable 1-page performance summary and KPI audit.

1. First, click "Refresh" in the left sidebar to ensure all live Supabase records are synced.
2. Go to the "KPI" page and toggle between "7 Days", "14 Days", "30 Days", and "All Time" to inspect the ranked Manager scorecards (#1 to #6), Team KPI %, Team Rating, and Overall Completion Rate.
3. Next, go to the "Home" Dashboard and click the "Weekly Report (PDF)" button at the top right.
4. The system automatically generates and downloads "Weekly_Manager_Summary_Report_YYYY-MM-DD.pdf" - a formatted 1-page A4 executive report containing Top Summary Cards (Total, Completed, Pending, Delayed >48h), individual Manager Performance Scorecards with visual progress bars, and a red "Priority Action Required: Queries Exceeding 48-Hours" watchlist!
5. When finished, click "Logout" at the bottom of the left sidebar.

System Logic & Policy: The "Weekly Report (PDF)" button is an Admin-exclusive feature built into the Home Dashboard hero banner.

M3.5 - SLA DEADLINES, EXTENSION RULES & KPI SCORING FORMULAS

- Turnaround KPI Scoring (Director Policy): On-Time Completion (Manager Done <= 48h or <= Approved Extension Date) = +1.0 pt | Late Completion (Manager Done > deadline) = +0.5 pt | Open & Overdue (> deadline without Manager Done) = 0.0 pt | Open & In-Progress (<= deadline) = Excluded from denominator until deadline passes or Manager finishes.
- Turnaround KPI % Formula: (Earned Points / Total Evaluated Queries) x 100, where Total Evaluated = On-Time + Late + Overdue.
- Overall KPI % Formula (Combined Score): Average of Turnaround KPI % and Average Star Rating Percentage ((Avg Rating / 5.0) x 100). If a Manager has 0 rated queries in the selected window, Overall KPI equals their Turnaround KPI %.
- Leaderboard Tie-Breaking Order: Ranked highest-first by (1) Overall KPI %, (2) Turnaround KPI %, (3) Average Star Rating, (4) Total Earned Points, and (5) On-Time Count.
- Anti-Cheat Safeguards: (a) Manager turnaround is stamped at manager_done_at_ms so slow Sender verification never penalizes the Manager. (b) Unresolved overdue queries (>48h) never drop out of the 7-day/14-day/30-day rolling windows until the Manager resolves them.

M3.6 - NOTIFICATION MATRIX, TROUBLESHOOTING & END-OF-SHIFT CHECKLIST

Portal Event	Trigger Action	Who Gets Notified	Your Expected Action
New Query Created	Any AM or Manager creates a new query	Assigned Manager + Admin (You)	Monitor incoming query assignment and volume.
Manager / Sender Remark	Any user adds or edits a remark	Counterparty + Admin (You)	Stay informed on ongoing resolution discussions.
Manager Checked Done	Assigned Manager marks "Mgr Done"	Sender + Admin (You)	Track resolution progress; awaiting Sender verification.
Query Completed	Sender checks "Sender Done" & submits rating	Assigned Manager + Admin (You)	Audit final completion and inspect the 1-5 Star Rating.
Extension Requested / Reviewed	Manager requests extension or Sender reviews it	Counterparty + Admin (You)	Intervene to Approve/Decline if Sender is unavailable.
Query Delayed (>48h)	Open query passes deadline without Manager Done	Manager + Sender + Admin (You)	Follow up with the assigned Manager on overdue bottleneck.

Daily Closing & Logout Procedure (Till the Very End):

- Download the "Weekly Report (PDF)" from the Home Dashboard every week to maintain an offline archive of team SLA compliance and overdue watchlists.

- Check Queries -> Status: "Extension Requested [Ext]" daily to ensure extension requests are promptly adjudicated by Senders (or override-approve/decline them yourself).
- Review the KPI Leaderboard across both "7 Days" (short-term momentum) and "30 Days" / "All Time" (long-term consistency).
- Always log out at the end of your session using the bottom-left "Logout" button.
